Composite Grading

The Composite Grading tab creates composite grading calculations for the selected courses. All sections of the course will inherit the composite grading tasks that are set here.

Example 1.

For the KTS Data Exchange Project, the CTE Final Grade grading tasks is used to report the student's final grade, either for the semester or for the year. The grades that are used to determine the student's CTE Final Grade are calculated from the CTE Term Grade grading tasks. They are assigned a percentage that together equals 100%, as shown in the above examples.

Be Careful! There is no validation if the entered calculation is more than 100%. However, if it is over 100%, the student's grade will not be accurate and it will affect GPA calculations.

Establish Composite Grading

1. Select the CTE Final Grade grading task.
2. Enter the Weight (percentage) for each portion of the CTE Term Grade needed to calculate the CTE Final Grade.
3. Click the Save button when finished.

At this point, when the teacher enters grades for assignments in the CTE Term Grade, Campus Instruction will calculate the composite grade for the CTE Final Grade based upon the weights entered from the Composite Grading tab.

Composite Grading Only At Technical School

- Composite grading will only be set up on the technical school courses at the technical school.
- Feeder high schools will not set up composite grading on technical school courses at the high school because grades received during the sync process will already be composited grades.
